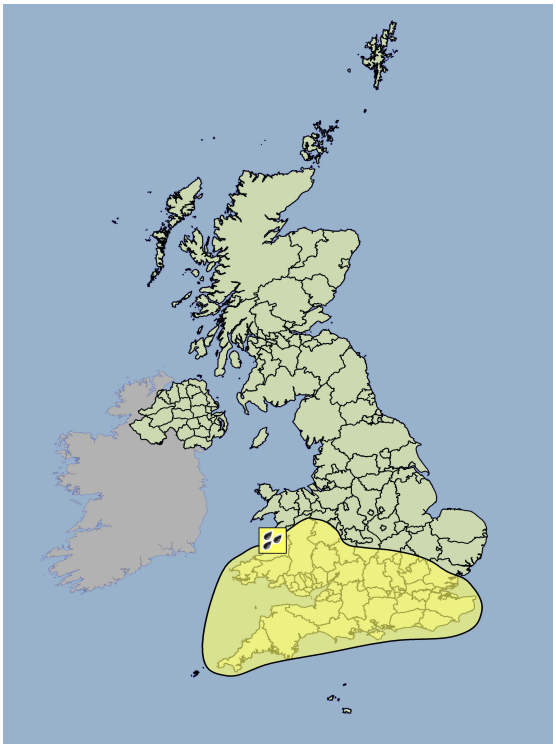
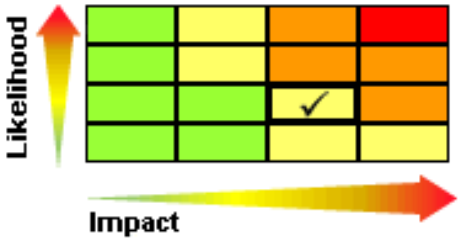
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
Yet another area of low pressure is expected to develop in the Atlantic, with associated frontal systems moving north and east across the UK during Friday afternoon and evening, bringing spells of heavy and persistent rain, especially across the southern parts of England and Wales.

As is usual this far ahead, there is considerable uncertainty in the track of the system and therefore the location of the most intense rainfall. However, it seems likely that around 10 to 20 mm of rain will fall widely across England and Wales, with over 30 mm possible across parts of south Wales and southwest England. With ongoing flooding in some areas, any further rain will only exacerbate the situation.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **15:00 on Fri, 14th Feb 2014** until **23:45 on Fri, 14th Feb 2014**

After a brighter interlude on Thursday, with some wintry showers, further spells of persistent and heavy rain are expected to spread northwards during Friday afternoon and evening, affecting many parts of England and Wales. Following repeated heavy rainfall events earlier in the week, the public should be aware of the potential for further flooding in places.

This Alert will be updated on Tuesday.
